

Amendments to the Specification:

Please replace the paragraph bridging pages 10 and 11 with the following amended paragraph:

The corner-forming element 16 according to figure 7 for the façade 11 according to the invention according to figure 5 differs from the corner-forming element 16 according to figure 3 in that a recess 66 68 corresponds to that of the contoured element 12 according to figure 6 is provided in the second attachment surface 48. This facilitates flush abutment of the first attachment surface 47 of the corner-forming element 16 on the first planar attachment surface 21 of the contoured element 12 and dispenses with the need to mill the nut 24 in the crossing area of the contoured elements 12 and/or in the area of the outer end of the contoured elements 12.
